Part I: Wireless Function Setting

Operating Instructions

Button Instruction

1. In the power-off state, short press the button once and the scanner will emit three short sounds. Release the button and the scanner will switch to the power-on state;
2. In the power-on state, short press the button once, the module light of the scanner will light up and the scanner will be in scanning mode;
3. In the power-on state, press and hold the button for 10 seconds, the scanner will emit three short high & low sounds and enter the power-off state.

LED Light Instruction

Red LED light ----- Charging indicator light

- 1) The breath light flash indicates the scanner is charging;
- 2) When the battery is fully charged, the red LED light keeps on;

Blue LED light(Bluetooth mode)/Green LED light(2.4G mode) ----- Wireless mode indicator light

- 1) The barcode is scanned once, the indicator light flashes once;
- 2) When the 2.4G and Bluetooth devices are not connected, the indicator light flashes slowly;
- 3) When a 2.4G or Bluetooth device is connected, the indicator light is always on;
- 4) When the battery is low, the indicator light flashes 3 times;
- 5) When the scanner entering 2.4G or Bluetooth pairing mode, the indicator light flashes quickly and continuously;

Buzzer Instruction

A short beep ----- state:

- 1) Read normal barcodes successfully;
- 2) Storage data uploaded successfully;

Two high & low short beeps ----- state:

- 1) The setup code is set successfully ;
- 2) Data storage success
- 3) USB/2.4G/Bluetooth connection success

Three long beeps ----- state:

- 1) Data storage failed or the flash memory is full;
- 2) Scan barcodes when the scanner is not connected;
- 3) Settings are wrong and settings failed;
- 4) The storage data exceeds the cache capacity;

Three short high & low beeps ----- state:

- 1) USB/2.4G/Bluetooth disconnected ;
- 2) Power-on prompt tone;
- 3) Power-off prompt tone;

Version No.

^&001&^

Wireless version No.

AD001

Scanner version No.

^&F01&^

Receiver version No.

AD000

Check device information

Factory Default Setting

^&002&^

Restore factory default

2.4G Mode Pairing

^&010&^

2.4G mode

(The scanner is paired with the receiver by factory default)

^&021&^

2.4G receiver pairing

Note:

Step 1: Scan '2.4G mode';

Step 2: Scan '2.4G receiver pairing'

Bluetooth HID Mode Pairing

After scanning the setup code, the scanner will enter the pairing state, the state lasts for 1 minute.

^&011&^

Bluetooth HID mode

^&C0F&^

Bluetooth HID pairing

(The scanner will pair with the bluetooth device automatically which is paired before)

Note:

Step 1: Scan 'Bluetooth HID mode';

Step 2: Scan 'Bluetooth HID pairing'

2.4G Keyboard Input Speed

Data key input interval, The time interval between the last button release and the next button press.

Note: The default interval [Middle] is to be compatible with hosts with different performance and operating systems, to ensure data output stability. If data is missing when the system freezes, you need to adjust the key input delay to a longer value.

^&C42&^

Fast(2ms)

^&C43&^

Middle(5ms)*

^&C44&^

Low(10ms)

Bluetooth Keyboard Input Speed

^&C22&^

Fast(2ms)

^&C09&^

Middle(5ms)*

^&C0A&^

Low(10ms)

Data Upload Mode

^&005&^

Immediate mode*

(The scanned data is uploaded immediately. If the uploading fails, scanner will make alarm beep and the data will not be saved.)

^&006&^

Inventory mode

(The scanned data will be automatically saved. If you need to view the statistical data or upload data, just scan the corresponding setting barcodes to achieve it.)

^&007&^

Automatic storage mode

(The data will be automatically saved when the connection distance exceeds the range, and automatically uploaded after the connection distance is within the range.)

Data Processing In Inventory Mode

^&031&^

Check number of stored data

^&030&^

Clear all stored data

^&032&^

Upload all stored data

USB Receiver Interface Type

Setting the USB interface type will change the USB interface type of both the scanner and receiver.

^&015&^

USB-HID*

^&016&^

USB-VCOM

Battery Status

^&037&^

Check battery status

Volume Setting

^&03A&^

Mute

^&03B&^

High volume*

^&03D&^

Low volume

Sleep Time

Note: Press and hold the button for about 10 seconds until the scanner emits three shutdown sounds, then release the button and the scanner will enter sleep mode.

^&040&^

Disable sleep

^&041&^

Enter sleep immediately

^&044&^

Enter sleep after 1 min

^&045&^

Enter sleep after 2 min

^&046&^

Enter sleep after 5 min*

^&047&^

Enter sleep after 10 min

^&048&^

Enter sleep after 30 min

Data Edit

Terminator

^&300&^

None

^&301&^

Enter*

^&302&^

LF

(In keyboard mode, [↵] is used to change lines.)

^&303&^

TAB

^&304&^

CR/LF

Hide Characters Setting

^&306&^

Hide the front characters

Note: for quick settings of hiding the front and back characters, please refer to the appendix(page 10) for details.

^&307&^

Hide the back characters

Note: Scan 'Hide the front characters', then scan 'Save and finish setting', the hidden front characters will be cleared.

^&305&^

Save and Finish Setting

Note: Scan 'Hide the back characters', then scan 'Save and finish setting', the hidden back characters will be cleared.

Prefix And Suffix Setting

^&308&^

Add prefix

Note: Scan 'Add prefix/suffix', then scan the content to be added (please refer to the ASCII code table in the wireless function part appendix), save and finish setting

^&309&^

Add suffix

Note: Scan 'Add prefix', then scan 'Save and finish setting', the added prefix will be cleared.

^&305&^

Save and finish setting

Note: Scan 'Add suffix', then scan 'Save and finish setting', the added suffix will be cleared.

Examples for prefix and suffix setting

Ex. 1: Set AB prefix

1. Scan 'Add prefix'
2. Scan ASCII data code of [A] [B] in 'ASCII Data Code Table'(page 12)

3. Scan 'Save and finish setting'

Ex. 2: Set F5 suffix

1. Scan 'Add suffix'
2. Scan ASCII data code of [F5] in 'ASCII Data Code Table'(page 12)

3. Scan 'Save and finish setting'

Character Replacement Setting

Note: To replace the visible characters or control characters in the barcode content, please use ^&30F&^D4AB format, A is the original character and B is the replacement character. The barcode is generated in hexadecimal format (0x**). If B is 00, the original character will be deleted.

GS Character Replacement

^&065&^

Replace to F8*

(The default recognition GS (0x1D) corresponds to the keyboard value F8. For details, please refer to the control character table)

^&066&^

Switch to custom GS replacement

^&066&^C2AB

Replace GS to AB

Note: In the setting code, ^&066&^C can not be changed. 2 indicates the number of new replacement characters. The maximum number of characters is 8. AB indicates the custom replacement content. You need to generate a new setting code for custom replacement.

Setting steps for custom GS replacement

Step 1: Switch to custom GS replacement

Step 2: Replace GS to AB

Convert Case

Default Setting Table

Function Type	Function Name	Default Setting
Function Setting	Communication Mode	2.4G
	USB Receiver Interface Type	USB-HID
	Scan Mode	Manual
	Keyboard Layouts	English(United States)
	Covert Case	No covert
	2.4G Keyboard Input Speed	5ms

	Bluetooth Keyboard Input Speed	5ms
	Data Upload Mode	Immediate mode
	USB-HID Data Output Type	Unicode
	GS Character Replacement	Replace to F8
Data Edit	Terminator	Enter (0×0D)
	Character Replacement Setting	Disable
Sound Setting	Volume Setting	High volume
Advanced Setting	White LED Fill Light Setting	Enable
	Red LED Aiming Light Setting	Enable
	Inverse Color Barcode Reading	Only read normal codes
	Sleep Time	Enter sleep after 5 min

Examples For Setting

Example of barcode reading length setting

When setting the minimum reading length of a barcode, you need to ensure that the minimum length you set is not longer than the current maximum length setting, otherwise an error will be prompted. Similarly, when setting the maximum reading length of a barcode, you need to ensure that the maximum length you set is not less than the current minimum length setting.

Ex1: Set the reading length of Code128 as 4-12 characters

“Minimum length(0~50bits)”-----Set Reading Length Range For Code 128

“4”-----Data Edit And Setting Parameter Barcodes

“Save”-----Data Edit And Setting Parameter Barcodes

“Maximum length(0~50bits)”-----Set Reading Length Range For Code 128

“1”-----Data Edit And Setting Parameter Barcodes

“2”-----Data Edit And Setting Parameter Barcodes

“Save”-----Data Edit And Setting Parameter Barcodes
