Product Introduction

This user guide is only suitable for 2D barcode scanner. The purpose is to enable users to fully master the use of the scanner. This manual is mainly for the software engineers and some customers who want to know the device in further.

The 2D barcode scanner can read all kinds of main 1D and 2D codes, including:

1D: Codabar、Code11、Code39、Code32、Interleaved 2 of 5、Industrial 2 of 5、Matrix 2 of 5、Code93、Code128、GS1-128、UPC-A、UPC-E、EAN 8、EAN 13、ISBN、ISSN、GS1 DataBar (RSS14)、GS1 DataBar Limited、GS1 DataBar Expanded、MSI、Standard 25、Plessey

2D: PDF417、Micro PDF417、QR Code、Micro QR、Data Matrix、Aztec Code、Hanxin code、Maxicode

This manual lists the main function of the scanner, including: barcode reading, supported barcode type, data edit, command setting and advanced setting.

The product has been configured with parameters suitable for most common application functions before packing. In most cases, users can use it directly without making any adjustments. The default functions and parameters are listed in the appendix of this manual for reference. The options marked with “*” in the setting code also represent the default functions or parameters.

Quick To Use

Install Method

For USB cable version scanners, it is plug and play, no need extra driver or power supply. That's convenient appropriate for Windows, Linux, Android and other system. It also support Virtual COM port, just need an extra driver supply, which can be offered by manufacturer or dealers. The physical serial port conforms to standard RS-232 interfaces, which can directly communicate with standard RS232 device. Please note an additional DC 5V power supply is generally required for RS232 interface. For details, please refer to the serial port function section.

Quick To Use

The scanner will startup in a short time after connecting to a power supply, scanner will automatically load the preset settings during startup, including interface, power on indication, volume indication, configuration, parameters setting. Normally, pressing the button can activate decoding. If the decoding is completed, the device will turn off reading, output data, sound or LED prompt (depending on the settings). In additional, the scanner also supports automation induction trigger, serial command trigger.

Setting Method

There are two methods for set up.

One method is scanning a barcode to finish setting.

Example: “Decoding sound tone 1”, or “Enable code 39”.

The other method needs to set up parameters.

Example: set “98” as suffix.

Setting steps: “Custom suffix”, “3”, “9”, “3”, “8”, “Save”.

Factory Default Setting

All the scanners have a factory default setting. Reading the "Restore factory default" barcode will restore all the settings of the scanner to the factory default.

You are most likely to use this barcode in the following situations:

1. The scanner settings are wrong, such as scanner can not read barcodes.
2. You have forgotten what settings you made for the scanner before, and you do not want to be affected by the previous settings.
3. The scanner is set to use a function that is not often used, and it has been used.

Note: * indicates the default value

Restore factory default

Version Information

The version number information is the current firmware version, and the device information includes the current version built time, firmware version, hardware information, device name, and SN number.

Version information

Device information

Function Settings

Interface Selection

USB Interface

When setting the USB interface, the scanner can be simulated as a HID-KBW device. In this mode, the scanner will become a virtual keyboard to send data to the host.

USB-KBW*

USB Virtual Serial Port

If the application of the host using the serial communication method to receive data, the scanner can be set to the USB-VCOM mode. This function requires the installation of the corresponding driver on the host.

USB-VCOM

RS232 Interface

The scanner with RS232 cable communicates with the host through the serial communication interface. It supports receiving reading data, issuing commands to control the scanner, and changing the function parameters of the scanner.

RS232

RS232 Baud Rate

The RS232 baud rate setting is only used in RS232 interface, It means sending data from the scanner to the host at a specified rate. The host must be set to the same baud rate as the scanner.

9600*

1200

2400

4800

19200

Number Lock Function

Enabling this function can move the numeric keypad in the letter area to the keypad area and input the number with keypad.

Number lock on

Number lock off *

Note: Before enabling this function, please make sure that the Number Lock of the host is turned on. If the "Alt Emulate Keyboard Mode" is turned on, this function will be invalid.

Case Conversion

No Conversion*

All convert to upper case

All convert to lower case

Character Input Delay

The time interval between key pressing during character input, from the last key release to the next key press.

Note: The default interval 5ms is to be compatible with hosts with different performance and operating systems and ensure data output stability. You need to set longer delay time if the data still lost due to slow running of system.

No delay

Delay 5ms*

Delay 10ms

Delay 20ms

Delay 40ms

Alt Emulate Keyboard

In order to enable the scanner to input any ASCII characters (hexadecimal 0x00 to 0xFF) in any keyboard languages, the keyboard can be set to Alt Emulate Keyboard mode. When using this mode to send characters, the speed will be slow because more data to be sent.

Alt emulate keyboard off *

Alt emulate keyboard on

Control Character Escape

The control characters escape output rules by this product cannot be recognized in some systems or software. You can achieve this function by setting the control character escape.

The following escape will be operated after successful decoding:

1. Press and hold the "CTRL" key
2. Press the letter keys on the keyboard in sequence according to the character escape (check the appendix for details)
3. Release the "CTRL" key

Control character escape off*

Control character escape on

Invisible Character Output

Example: The following QR code has 'CR' invisible character:

123«CR»456

The default output data: 123

456

Ignore invisible characters: 123456

Note: If the barcode contains 0x0A characters, LF cannot be displayed in WINDOWS. Please set 0x0A to replace 0x0D (Enter).

Don't ignore invisible characters*

Ignore invisible characters

Input Encoding Format

Select the encoding format for creating the code (if it is PDF417, QR Code, Data Matrix, etc.). After setting, the code can be correctly recognized. UTF-8 and Shift-JIS encoding format barcodes are automatically recognized as default.

UTF-8

GBK

Automatic*

KOI-8

BIG5

JIS

Output Encoding Format

If the data the host receiving does not display the correct characters, the barcode could be created by a different encoding format.

USA*

UTF-8

BIG5

GS Control Character Replacement

No replacement*

Replace GS to Ç

Replace GS to |

Replace GS to ^]

Replace GS to]

Replace GS to <GS>

Enable custom GS replacement

Custom GS replacement setting

Custom GS Replacement Instruction(replace to 10 characters at most)

Example: Replace GS character to '#GS#'

1. Scan 'Enable custom GS replacement'
2. Scan 'Custom GS replacement setting'
3. Scan ASCII hex value codes of #GS#, ASCII hex value of #GS# are 0x23 0x47 0x53 0x23 in 'Appendix ASCII table', then scan '2' '3' '4' '7' '5' '3' '2' '3' barcodes in the 'Data Edit And Setting Parameter Barcodes'
4. Scan 'Save' in the 'Data Edit And Setting Parameter Barcodes'

Data Edit

Prefix Setting

Example: set "a" as prefix(hexadecimal value of a is 61).

Step:

- "Enable custom prefix setting",
- "Custom prefix setting",
- "6", (data edit parameter table)
- "1", (data edit parameter table)
- "Save".(data edit parameter table)

Disable custom prefix setting*

Enable custom prefix setting

Custom prefix setting

Suffix Setting

Example: set "a" as suffix(hexadecimal value of a is 61).

Step:

- "Enable custom suffix setting",
- "Custom suffix setting",
- "6", (data edit parameter table)
- "1", (data edit parameter table)

“Save”.(data edit parameter table)

Disable custom suffix setting*

Enable custom suffix setting

Custom suffix setting

Terminator And Start Character Setting

The terminator is at the end of the data, and the start character is at the front of the data. The key value of the terminator ETX is End, and the key value of the start character STX is Home.

No terminator

Terminator Enter*
(0x0D)

Terminator(CR/LF)
(0x0D 0x0A)

Terminator TAB

Terminator ETX

Terminator LF
(0x0A)

No start character*

Start character STX

Data Cutting

Send full data*

Send start field of data

Send middle field of data

Send end field of data

Send start+middle field of data

Send start+end field of data

Send middle+end field of data

Data Bit Setting

The data edit function can cut the barcode data into three fields: start/middle/end fields by configuring the data length of the start/end fields. Please set the length and sending of the start/end fields according to actual needs. Note: Customized prefix and suffix, start character, terminator, CODE ID, AIM ID and other non original data are not affected by the data edit function.

Example: Set the start field as 2 characters, set the end field as 3 characters, send middle field data.

Steps:

“Set start field length”

“2”, (data edit parameter table)

“Save”.(data edit parameter table)

“Set end field length”

“3”, (data edit parameter table)

“Save”.(data edit parameter table)

“Send middle field of data”

Set start field length

Set end field length

Barcode Data 0D 0A Line Feed Setting

Only 0A line feed

Only 0D line feed*

0A 0D both line feed

Code ID Prefix

After turning on Code ID, the corresponding Code ID prefix will appear in the output data. For details, please refer to the appendix.

Read both normal & inverse codes

GS1 AI Character

Read barcodes containing GS1 AI characters, such as GS1-128, GS1-DM, GS1-Databar, and medical UDI barcodes, and output AI characters containing brackets. For example:

(01) 0 0000123 00001 7 (17) 240601

GS1-DM

(01) 0 0000123 00001 7

GS1-128

No processing

Output including bracket

Output including bracket+LF

Barcode Function Setting

Overall Setting

Each type of barcode has its own unique features. The settings in this chapter can be used to adjust the scanner

to adapt to these feature changes.

The fewer barcode types turned on "Enable Reading", the faster the scanner will read. Disabling some barcode types can improve reading performance.

Enable/Disable Reading 1D/2D Barcodes

Enable all 1D barcodes

Disable all 1D barcodes

Enable all 2D barcodes

Disable all 2D barcodes

UPC/EAN/JAN Additional Code

Examples For Setting

Example of barcode reading length setting

When setting the minimum reading length of a barcode, you need to ensure that the minimum length you set is not longer than the current maximum length setting, otherwise an error will be prompted. Similarly, when setting

the maximum reading length of a barcode, you need to ensure that the maximum length you set is not less than the current minimum length setting.

Ex1: Set the reading length of Code128 as 4-12 characters

“Minimum length(0~50bits)”-----Set Reading Length Range For Code 128

“4”-----Data Edit And Setting Parameter Barcodes

“Save”-----Data Edit And Setting Parameter Barcodes

“Maximum length(0~50bits)”-----Set Reading Length Range For Code 128

“1”-----Data Edit And Setting Parameter Barcodes

“2”-----Data Edit And Setting Parameter Barcodes

“Save”-----Data Edit And Setting Parameter Barcodes
